The Conference which will take place in the German-Polish-twin cities Frankfurt (Oder) and Słubice (24-25 May 2018) aims at discussing future collaborative EU Research funding opportunities with the aim of fostering German-Polish cooperation. More precisely, it will

- inform on EU collaboration programmes with a special focus on interdisciplinary research on societies, climate and environment as well as energy-related topics,
- bring together researchers, EU research affairs staff in German and Polish universities and research institutions, representatives from the European funding institutions and National Contact Points from both countries,
- foster cooperation for future projects through knowledge exchange on relevant projects and research interests among the conference participants,
- provide indications on how to address evaluators in EU proposals, especially in Horizon 2020.

Participants are encouraged to present their ideas for potential EU research projects through a poster in the speed networking part (24 May, 18h30). In order to register for the poster presentation, please follow the registration link.
